full text

Document 2: JP 2003-026773 A (Nihon Kayaku Co., Ltd.) 29 January 2003, paragraphs 0042 and 0044

The inventions of claims 1 and 2 do not appear to involve an inventive step over documents 1 and 2 (paragraphs 0042 and 0044) cited in the ISR. It would be easy for a person skilled in the art to use an adhesive consisting of an epoxy resin composition described in document 2 for the adhesive layer of the flexible circuit board described in the document 1. Also, specifying the adhesion strength to 7.0 N/cm or greater is merely within the commonly required adhesion strength.

The inventions of claims 3-6 do not appear to involve an inventive step over documents 1 and 2 cited in the ISR. Document 1 discloses a method of manufacturing a double surface flexible circuit board by forming a cast laminate film by forming an insulation layer on a metal foil, then forming an adhesive layer on one or both of the insulation layer of said laminate film, making the insulation layer of the laminate film on the inside and re-laminating with the adhesive.
